

# TERRAFORM OVERVIEW

ARNAUD MORIN

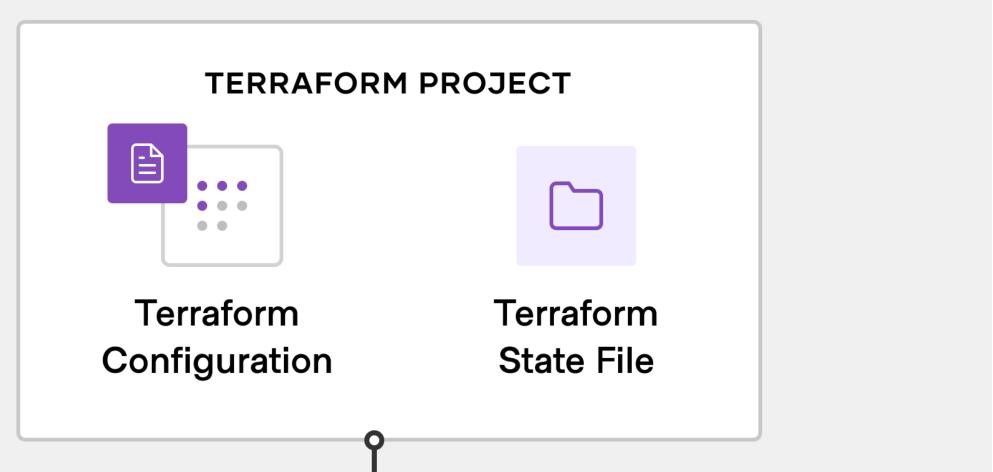

# WHAT IS TERRAFORM?

- Open Source software from hashicorp
- Create, update, manage infrastructure from code
- Because it's code, it can be versionned (using git for ex.)
- Intent driven

# TERRAFORM WORKFLOW

## Write

Define infrastructure in configuration files

# TERRAFORM WORKFLOW

## Plan

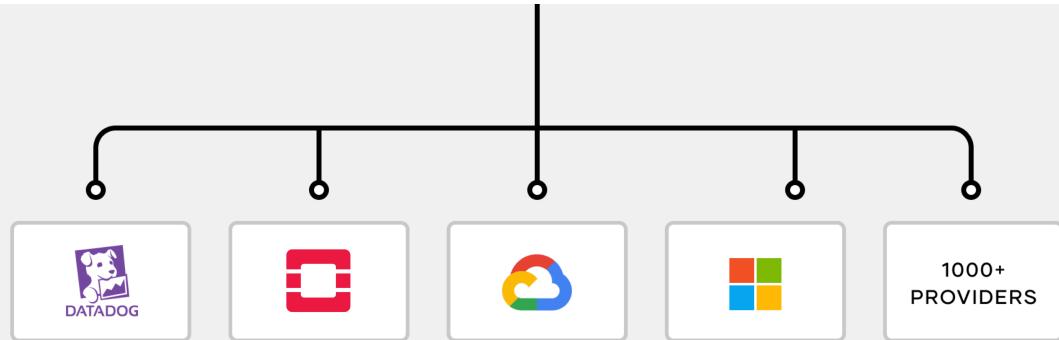

Review the changes  
Terraform will make to  
your infrastructure

```
$ terraform plan  
...  
Terraform will perform  
the following actions
```

# TERRAFORM WORKFLOW

## Apply

Terraform provisions  
your infrastructure and  
updates the state file.

# INFRASTRUCTURE AS CODE

```
provider "openstack" {  
}  
resource "openstack_compute_instance_v2" "server1" {  
    name          = "server1"  
    image_name    = "Debian 11"  
    flavor_name   = "small"  
    network {  
        name = "public"  
    }  
}
```

# TERRAFORM PLAN

Terraform will perform the following actions:

```
# openstack_compute_instance_v2.server1 will be created
+ resource "openstack_compute_instance_v2" "server1" {
    + access_ip_v4          = (known after apply)
    + access_ip_v6          = (known after apply)
    + all_metadata          = (known after apply)
    + all_tags               = (known after apply)
    + availability_zone     = (known after apply)
    + flavor_id              = (known after apply)
    + flavor_name            = "small"
    + force_delete           = false
    + id                     = (known after apply)
    + image_id               = (known after apply)
    + image_name              = "Debian 11"
```

# TERRAFORM APPLY

```
openstack_compute_instance_v2.server1: Creating...
openstack_compute_instance_v2.server1: Still creating... [10s
openstack_compute_instance_v2.server1: Creation complete after

Apply complete! Resources: 1 added, 0 changed, 1 destroyed.
```

# TERRAFORM DESTROY

Terraform will perform the following actions:

```
# openstack_compute_instance_v2.server1 will be destroyed
- resource "openstack_compute_instance_v2" "server1" {
    - access_ip_v4          = "193.70.24.7"  -> null
    - all_metadata           = {}  -> null
    - all_tags               = []  -> null
    - availability_zone     = "nova"  -> null
    - flavor_id              = "93f96757-ea92-44bf-8204-da2eaf5
    - flavor_name             = "small"  -> null
    - force_delete            = false  -> null
    - id                      = "005ae25d-ce0a-425b-94e6-fb0cb27
    - image_id                = "3a2089f1-9b9d-4dc1-970a-9dcb785
    - image_name              = "Debian 11"  -> null
    - name                    = "server1"  -> null
```
