# Variables location in memory

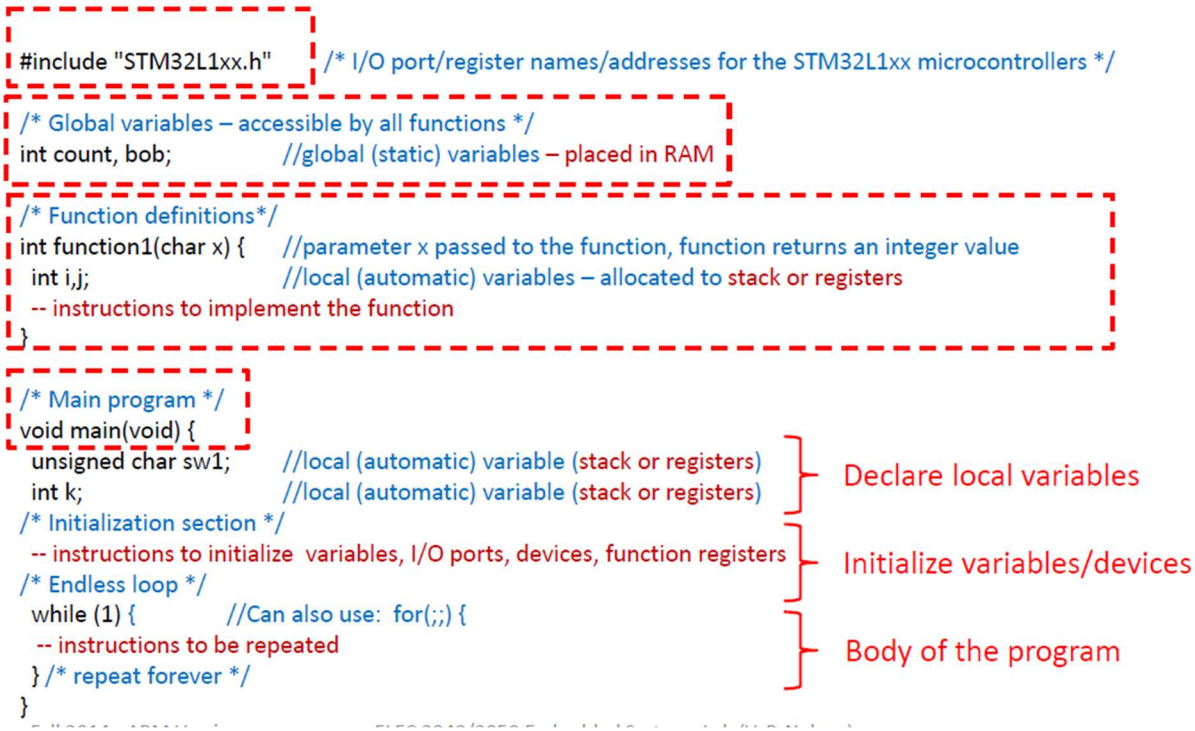

Jean-Jacques Meneu

***work to be provided***

Write a program that shows the location of variables in the STM32L476RG. The program must have variables in the following locations:

- In the flash (constants)
- In the data and BSS section of the SRAM
- In the SRAM stack
- In the registers

Reminder of the locations of variables:

You need to comment your program explaining where you expect the variables. Then, thanks to the STM32CubeIDE, thanks to the debug mode and the build analyzer, put screen shots in your report to confirm the location of the variables.
